

Product data sheet

ARM Unplugged

How can you keep the simplicity of a spreadsheet approach to risk management without the downsides?

ARM Unplugged gives you an easy to use way to input risk and opportunity information. It lets you work standalone yet ensures adherence to corporate standards so data can be easily consolidated to provide the overall picture of risk exposure.

ARM Unplugged provides an easy to use way to enter risk and opportunity information with a familiar grid style data entry screen, that can be customized to meet specific needs. ARM Unplugged is designed to be used when you are offline – at a meeting, on the road, or running a workshop at a remote location. It's simplicity and flexibility will drive acceptance of the risk process as part of everyone's daily activities.

ARM Unplugged provides a familiar spreadsheet-style way to capture risk and opportunity information for all types of employee. This easy to use interface is combined with two-way data synchronization to and from your corporate ARM risk system.

ARM Unplugged lets you download to your device corporate data such as existing risks, risk hierarchies and corporate risk scoring schemes. The ARM security model means access is controlled to just the corporate risk records relevant to you and the area of the business where you are focusing. You then have the freedom to work on this data through the customizable, spreadsheet-like interface before synchronizing back to the central ARM system. Your risk information will be validated and audited to meet corporate rules and standards. Your data is combined with other uploads so that your organization can maintain one consistent system of record for risk management.

ARM Unplugged features enable you to work the way you want, as productively as possible:

- Capture risk and opportunity information via easy to use screens
- Customize screen design on the fly and hide irrelevant data
- One-click scoring of risks based on the corporate scoring scheme
- Scratch pad for fast risk and opportunity note taking
- Voice recorder to collect comments and reminders
- Count down and count up clocks to ensure you use your time wisely
- Snapshot reporting
- Instant analysis of what-if scenarios
- Graphical display of risks and opportunities including histograms and pie charts

Some typical use cases for ARM Unplugged:

- Offline capture of risk and opportunity data in remote geographical locations
- Simple risk input and review for occasional users to replace spreadsheets
- Multi-disciplinary collaborative workshops
- Boardroom – risk capture sessions, what-if planning and opportunity assessment
- Review sessions with supply chain and project partners
- Risk-adjusted business planning
- Risk workshops with customers as part of the bid process or post-sale

*ARM Unplugged make risk and opportunity capture **simple, valuable and personal.***

- Simple** spreadsheet-style look and feel for rapid risk and opportunity capture
- Valuable** maintains the integrity of your corporate risk register so management see the complete picture
- Personal** work on risk data offline via customized screens and synchronize to the corporate ARM risk database when you're ready
